State Finished

Completed on Monday, 8 September 2025, 5:12 PM

Time taken 1 day

Grade **10.00** out of 10.00 (**100%**)

Question 1

Correct

Mark 2.00 out of 2.00

Write a C program to read A values and check whether A is positive number or not.

For example:

Input	Result
5	a is positive number

Answer: (penalty regime: 0 %)

Reset answer

```
1 #include<stdio.h>
2 int main()
3 {
4     int A;
5     scanf("%d", &A);
6     if (A>0)
7         printf("a is positive number\n");
8     else
9         printf(" ");
10    return 0;
11 }
```

	Input	Expected	Got	
✓	5	a is positive number	a is positive number	✓
✓	2	a is positive number	a is positive number	✓
✓	-2			✓

Passed all tests! ✓

Correct

Marks for this submission: 2.00/2.00.

Question **2**

Correct

Mark 2.00 out of 2.00

Write a C program to check whether a number is even or odd using if else

For example:

Input	Result
12	Number is Even.
11	Number is Odd.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int num;
5     scanf("%d",&num);
6     if (num%2==0)
7         printf("Number is Even.\n");
8     else
9         printf("Number is Odd.\n");
10    return 0;
11 }
```

	Input	Expected	Got	
✓	12	Number is Even.	Number is Even.	✓
✓	11	Number is Odd.	Number is Odd.	✓

Passed all tests! ✓

Correct

Marks for this submission: 2.00/2.00.

Question **3**

Correct

Mark 2.00 out of 2.00

Write a C Program for analysis of people of certain age groups who are eligible for getting a suitable job if their condition and norms get satisfied using nested if statement. Assume eligible age is 18 - 50.

For example:

Input	Result
36	He/She is eligible for Working
63	He/She is Not eligible for Working

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main()
3  {
4      int age;
5      scanf("%d", &age);
6      if (age < 18)
7          printf("Not eligible for Working ");
8      else if (age > 50)
9          printf("He/She is Not eligible for Working");
10
11     else
12         printf("He/She is eligible for Working ");
13 }
14
15
16
17
18

```

	Input	Expected	Got	
✓	36	He/She is eligible for Working	He/She is eligible for Working	✓
✓	63	He/She is Not eligible for Working	He/She is Not eligible for Working	✓
✓	17	Not eligible for Working	Not eligible for Working	✓

Passed all tests! ✓

Correct

Marks for this submission: 2.00/2.00.

Question 4

Correct

Mark 2.00 out of 2.00

Write a C program to read the student marks and print the which class he/she got?

marks>=70 print FIRST CLASS WITH DISTINCTION

60>= marks <70 print FIRST CLASS

50>= marks <60 print SECOND CLASS

40>= marks <50 print THIRD CLASS

marks<40 print U r Failed...Better luck next time

For example:

Input	Result
70	...FIRST CLASS WITH DISTINCTION...
62	...FIRST CLASS...

Answer: (penalty regime: 0 %)

Reset answer

```
1 #include <stdio.h>
2 int main()
3 {
4     int marks;
5     scanf("%d",&marks);
6     if(marks >= 70)
7         printf("...FIRST CLASS WITH DISTINCTION...\n");
8     else if(marks >=60  && marks < 70)
9         printf("...FIRST CLASS...\n");
10    else if(marks >=50  && marks < 60)
11        printf("...SECOND CLASS...\n");
12    else if(marks >=40  && marks < 50)
13        printf("...THIRD CLASS...\n");
14    else
15        printf("...U r Failed...Better luck next time\n");
16    return 0;
17 }
```

	Input	Expected	Got	
✓	70	...FIRST CLASS WITH DISTINCTION...	...FIRST CLASS WITH DISTINCTION...	✓
✓	62	...FIRST CLASS...	...FIRST CLASS...	✓
✓	58	...SECOND CLASS...	...SECOND CLASS...	✓
✓	45	...THIRD CLASS...	...THIRD CLASS...	✓
✓	39	...U r Failed...Better luck next time	...U r Failed...Better luck next time	✓
✓	55	...SECOND CLASS...	...SECOND CLASS...	✓
✓	70	...FIRST CLASS WITH DISTINCTION...	...FIRST CLASS WITH DISTINCTION...	✓

	Input	Expected	Got	
✓	90	...FIRST CLASS WITH DISTINCTION...	...FIRST CLASS WITH DISTINCTION...	✓

Passed all tests! ✓

Correct

Marks for this submission: 2.00/2.00.

Question **5**

Correct

Mark 2.00 out of 2.00

Write a C Program to simulate the relation operator(<,>) using the switch statement

For example:

Input	Result
10 < 40	Result = 1

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main()
3  {
4      int a,b,result;
5      char op;
6      scanf("%d %c %d", &a, &op, &b);
7      switch(op){
8          case '<': result = ( a < b);
9              break;
10         case '>': result = (a > b);
11             break;
12     }
13     printf("Result = %d\n", result);
14     return 0;
15 }
```

	Input	Expected	Got	
✓	10 < 40	Result = 1	Result = 1	✓
✓	65 > 65	Result = 0	Result = 0	✓

Passed all tests! ✓

Correct

Marks for this submission: 2.00/2.00.
